

Instructions for compiling and run the code

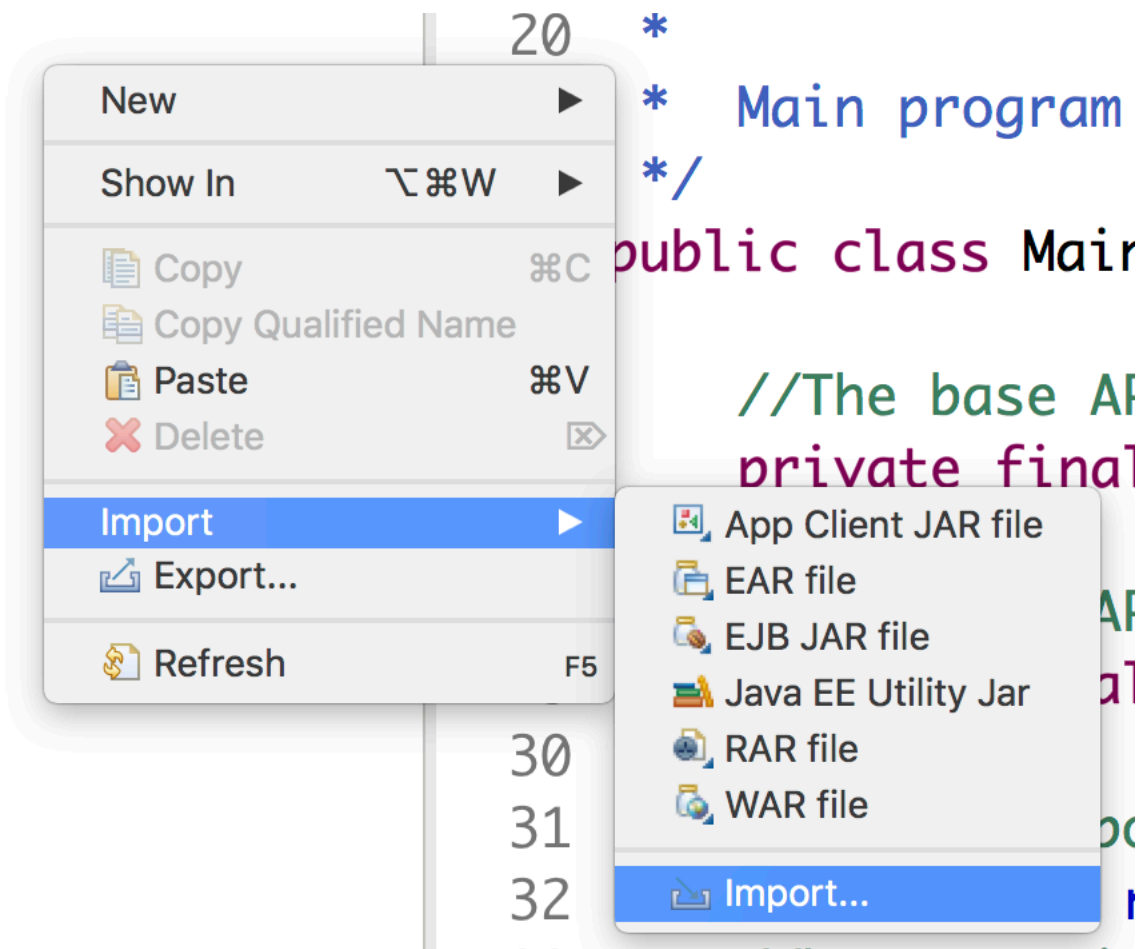

Step 1:

You should have a java JDK and IED (eclipse) for java install in your local machine. The instruction for installation you can find it here:

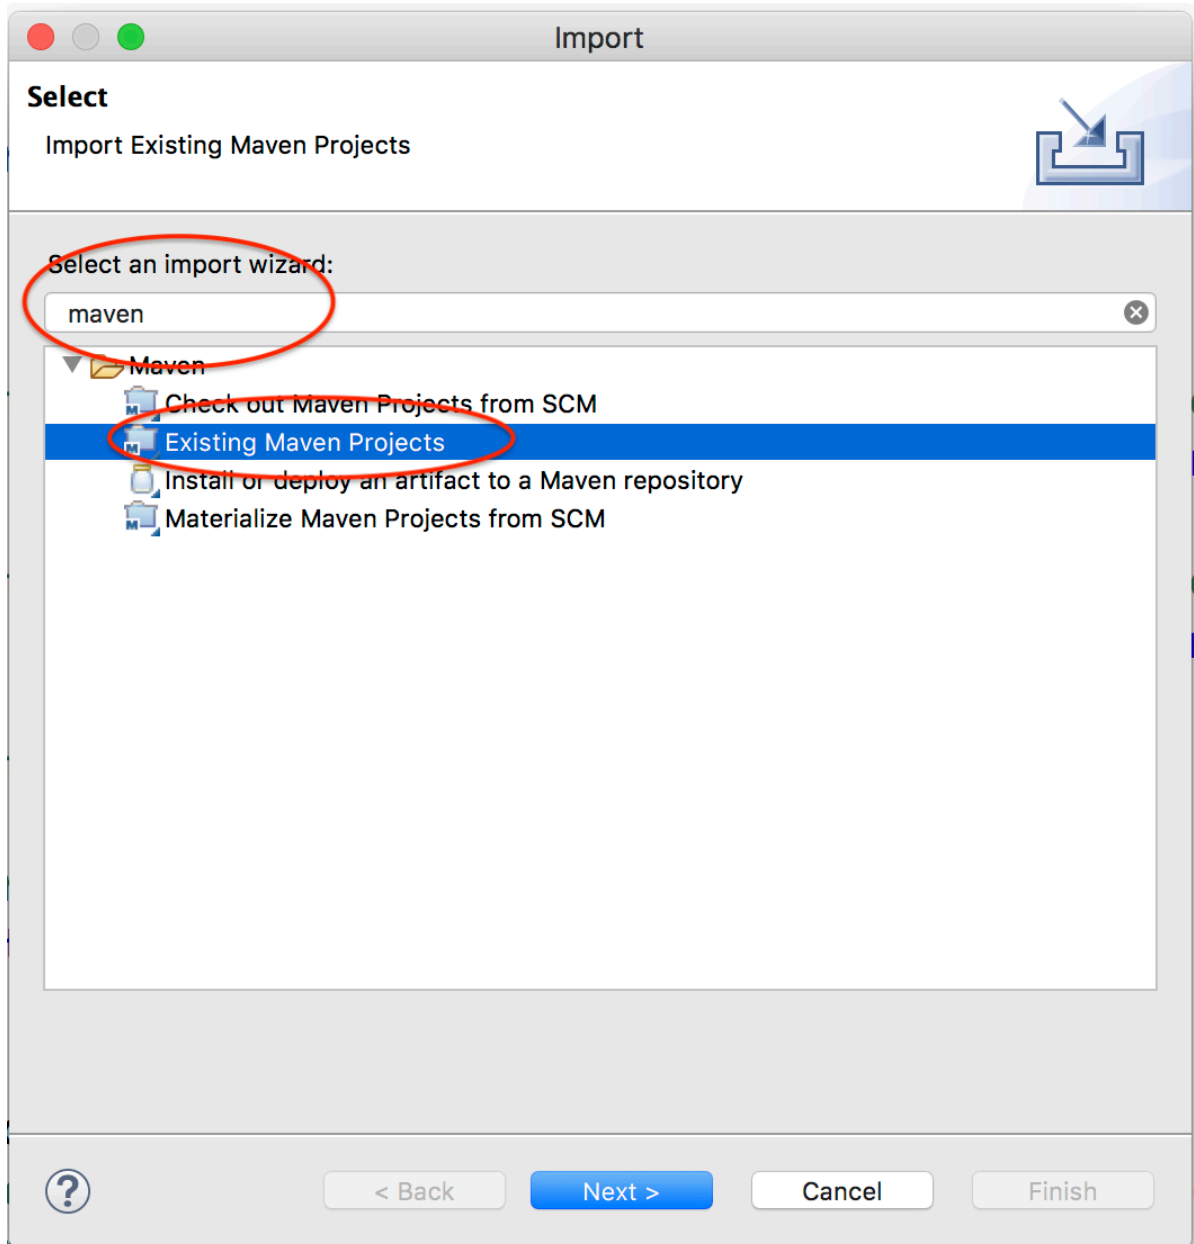

https://www.ntu.edu.sg/home/ehchua/programming/howto/EclipseJava_HowTo.html

Step 2: After you install java JDK and eclipse go to workbench.

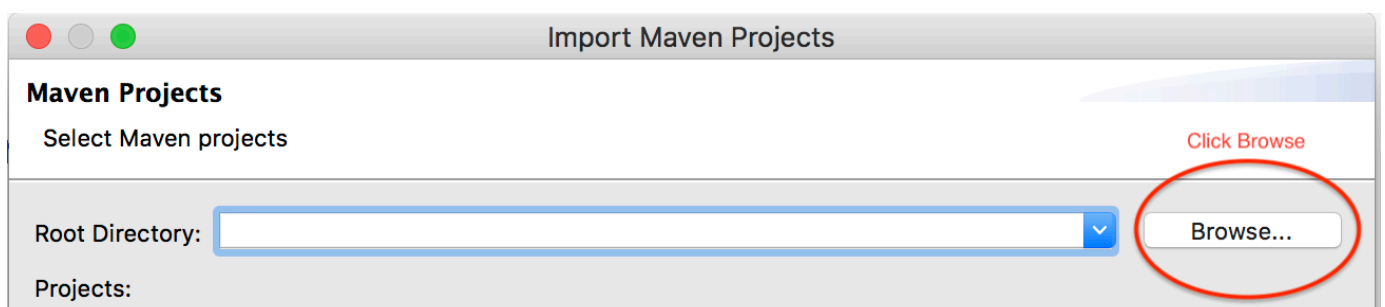

right click at anywhere under the project explorer—>Select import —>click import

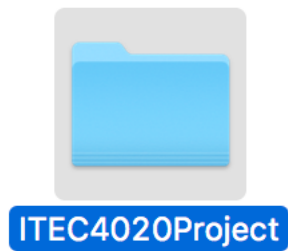

Type maven in the input bar then click next.

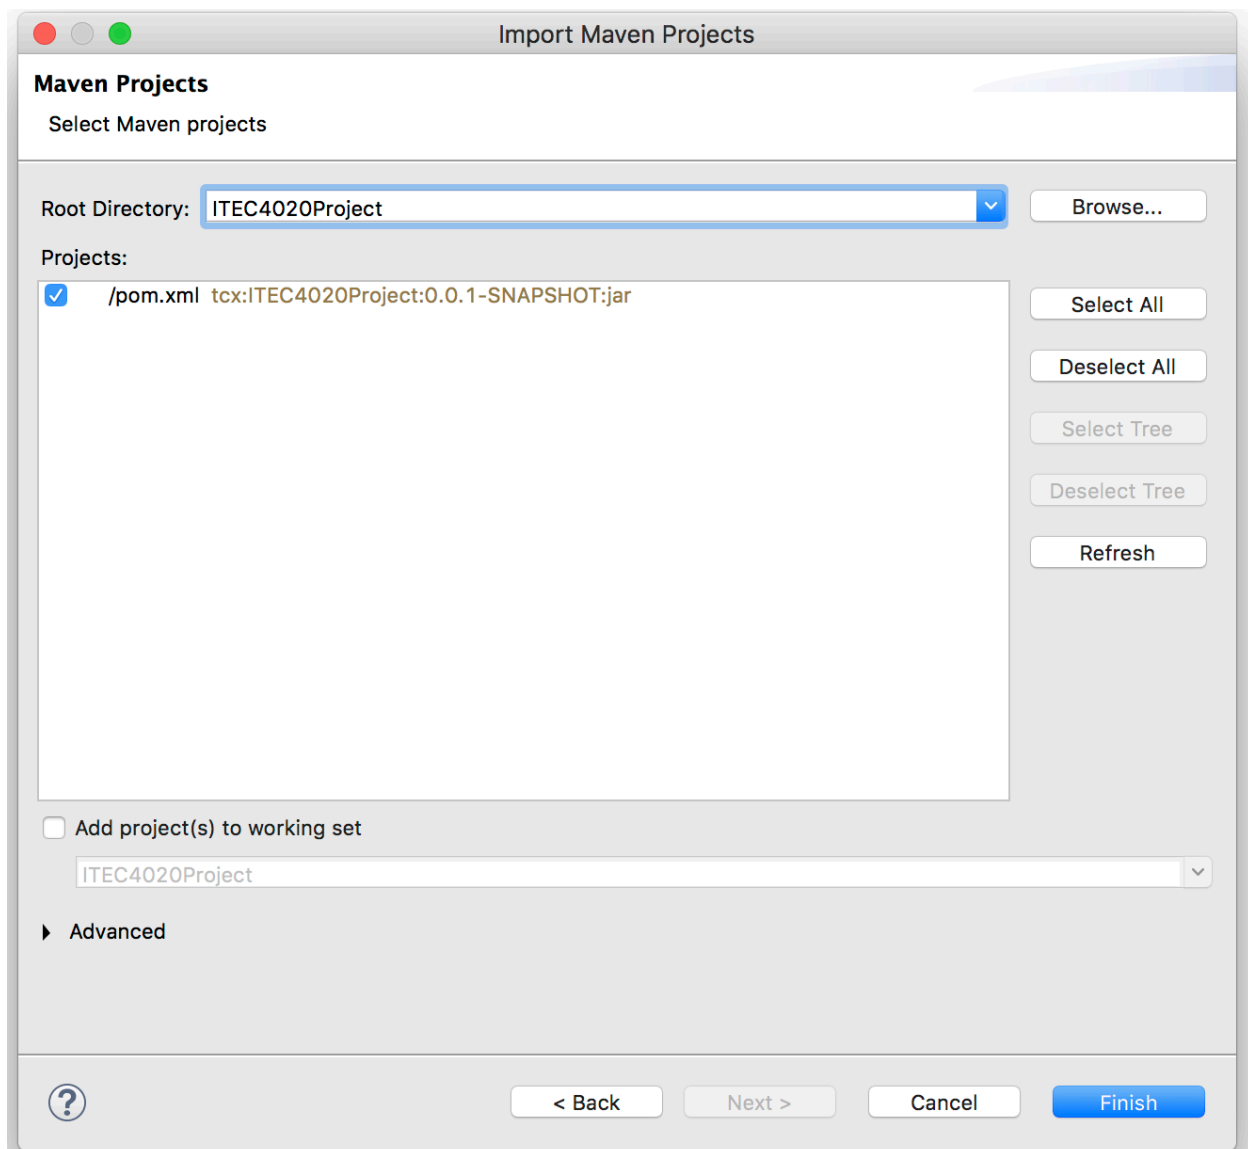

Then you will see this window, click browse

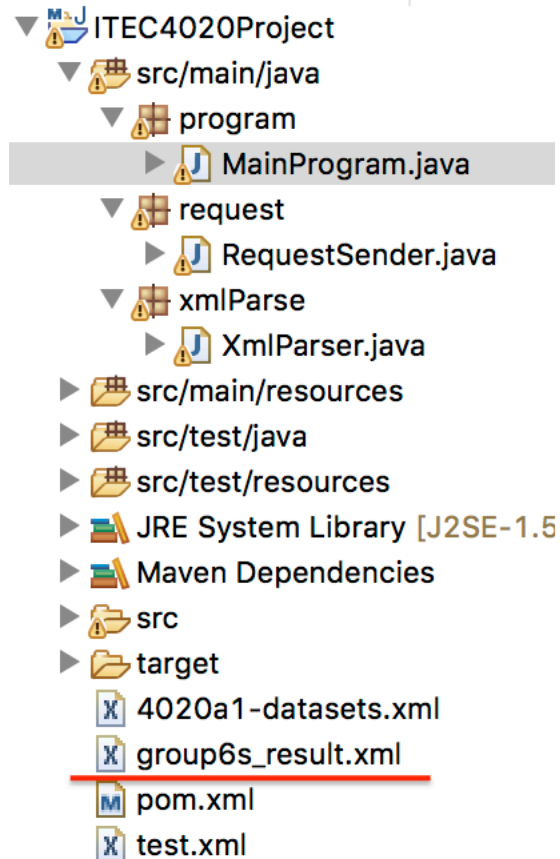

Select the project folder, then click open

Then make sure pom.xml is checked, and click finish

Then you will see the project in the project explorer, there are three java file in the project

Double click any of .java file and you will see the source code with comment

MainProgram.java is the main program of the application. You can execute this program and a result file will be created.
